

Adhesion Promoters

BEFORE PRINTING

BONDAID 1

Solvent-Based Adhesion Promoter for UV Curable Prints on Metal, Glass, and Tile

- Designed to improve adhesion on metal, glass and tile
- Acts as a general cleanser prior to printing
- Reduces static electricity on the surface
- Reduces ink drop deflection
- Reduces potential for new particles being attracted to the substrate during printing
- Always test the results of this product on your specific substrate using your application method prior to using in production
- 1 litre bottle

BONDAID 2

Solvent-Based Adhesion Promoter for UV Curable Prints on POLYCARBONATE

- Designed to improve adhesion on acrylic, Lexan and polycarbonate
- Act as a general cleanser prior to printing
- Reduces static electricity on the surface
- Reduces ink drop deflection
- Reduces the potential for new particles being attracted to the substrate during printing
- Always test the results of this product on your specific substrate using your application method prior to using in production
- 1 litre bottle
