

What sets PrintFactory apart from other RIP workflows?

While many RIP solutions offer similar features, PrintFactory's cloud-based connectivity is a game-changer. This unique approach allows you to seamlessly connect all users, devices, and jobs within your network.

Think of it like switching from a clunky analogue TV subscription to a streaming service like Netflix. With PrintFactory, you're no longer tied down to physical dongles or limited to a single device. You can access and manage your print jobs from anywhere, anytime.

This level of flexibility and connectivity is a major advantage that can streamline your workflow and boost productivity.

Other RIPs

For years, our media consumption was limited by physical constraints. We relied on bulky TV sets, tethered to a wall outlet. To watch recorded content, we needed to connect a VCR device (often with very limited storage).

Traditional RIP software often follows a similar model. They're typically tied to a specific computer or device, and require additional software like Photoshop for design and preparation, and the storage needs to be constantly managed when printing large files.

Gathering the family around a single TV can be a fun bonding experience, even if you disagree on what to watch.

But imagine the frustration of having your entire team tethered to workstations near a printer! To check the status of a job, you'd have to physically go to the device.

PrintFactory Workflow

The advent of cable TV and streaming services like Netflix revolutionized media consumption. We gained unprecedented choice and flexibility. We could watch our favorite shows on demand and access content from anywhere with an internet connection.

PrintFactory's cloud-based RIP workflow offers a similar level of freedom. It connects to all your devices and empowers you to work the way you want, whenever and wherever you choose.

With PrintFactory, it's like streaming a live show with friends and family, no matter where they are. Your design, pre-press, production, and management teams can collaborate seamlessly from anywhere, preparing, editing, and sending jobs to the printer without being tied to a workstation. Monitor job progress, collaborate on projects, and make informed decisions in real-time, regardless of your location.

Imagine trying to watch TV in the living room and then deciding to continue watching in your bedroom. You'd have to physically move the entire TV, find a power outlet, and set it up again. It's a cumbersome and inconvenient process.

With a streaming service like Netflix, you can easily switch from watching on your living room TV to continuing on your bedroom tablet. There's no need to physically move or set up any equipment.

PrintFactory offers a similar level of convenience. Prepare a job on your office Mac, and then continue working on it from home using your Windows laptop. There's no need to bring the printer home or deal with complex VPNs or middleware. Everything is seamlessly connected through the cloud.

Even when you're away from the office, **PrintFactory keeps you connected.**

Check job status, reroute orders, or resubmit tasks from your mobile device or laptop, anytime and anywhere.

Cost of Ownership

“In the early 1970s a good, 21-inch console color television might cost you \$500. In today's money that would be around \$3300. A good tabletop set might be \$350, or about \$2200 today. Neither set would offer remote control, nor anything close to high definition and certainly not high dynamic range.”

Perpetual Licenses

With traditional software, you pay a significant upfront cost for a specific version.

It's like buying a VHS or DVD collection - a large investment for something that will eventually become outdated. Plus, you need to pay for upgrades and support separately.

SaaS Plans

PrintFactory offers a more flexible subscription model, similar to Netflix. Pay a small monthly or yearly fee and enjoy access to the latest features and updates, including support. Unlike Netflix, there are no limits on the number of users, locations, profiles, recipes, or RIPS you can have. And instead of cluttering your local storage, we securely store everything in the cloud, ensuring easy access and quick recovery even if your files are lost.

By embracing modern technology, you're positioning your business for long-term success. It's as easy as upgrading from a classic TV to Netflix! You'll enjoy increased efficiency, reduced costs, and a more sustainable future.
